MAIN BODY

In the first stage, used bottles are collected at a recycling point and transported by truck.

The second stage starts in a cleaning location, where these recycled bottles are washed by high-pressure water and sorted by color into green, brown and clear ones. When the cleaning is done, the bottles are conveyed to a glass factory where they are cut into glass pieces which are then poured into a furnace.

MAIN BODY

After being heated in the furnace at the temperature 600-800℃, the broken glass is melted into liquid, which flows into a glass mold， mixed with new liquid glass.

In the final stage, new, empty bottles are filled with liquid, then packed and despatched to the supermarket and picked by consumers.

At this point, a cycle has been completed and a new cycle will begin.

- 变化后
- The year 1860 saw a doubling of the number of homes, in contrast to which the size of farmland and woods was reduced by half. In the meantime, a bridge could be seen built over the river and a road was constructed,linking the river to the residences.
- 140 years later, Kelsbey accelerated its pace of development, with the number of homes mounting to 500, whereas it is worth mentioning that farms and woods completely disappeared, giving way to several school buildings and sports facilities in the south-eastern corner of the village. They were connected with the residential area in the north by a newly-built road. Furthermore, some shops opened up along the river bank and a large stretch of wetland for birds was established at the southern end of the river.
